

AGENTICSENSE

Trusted Technology Partner | Global B2B Agentic AI

We design, engineer, and deploy autonomous AI agents that integrate natively with enterprise ERP systems. Built from the ground up for real operations, real workflows, and real business outcomes.

BBB

"Our Business-Backed Business (BBB) model ensures that every single deployment creates a compounding ripple effect of value across your entire ecosystem."

AI Arm Paradigm

Embedded intelligence within your organisational structure, operating continuously on your behalf

Waqas Ali

Chief Executive Officer

Strategic Leadership | B2B Partnerships | Enterprise AI Growth

As Chief Executive Officer, **Waqas Ali** leads AgenticSense's strategic direction, partnership vision, and long-term business growth. His focus is on positioning AgenticSense as a trusted technology partner and AI execution arm for established B2B organisations. He drives the company's B2B2B strategy, partner ecosystem development, and enterprise value creation.

Our goal is to build AgenticSense as the trusted AI execution arm behind established businesses — creating long-term value through partnership, execution, and trust.

Strategic Direction

Leading the company's long-term vision, positioning, and market strategy.

B2B2B Partnership Growth

Building trusted partner ecosystems with established business networks.

Enterprise Value Creation

Ensuring AI solutions create measurable operational and commercial impact.

Brand & Market Positioning

Positioning AgenticSense as a premium AI execution partner, not a generic AI agency.

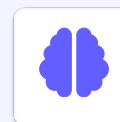

What is AgenticSense?

AgenticSense is a global B2B Agentic AI services company — not a generic AI consultancy or software platform.

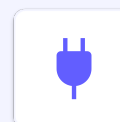

We design, engineer, and deploy autonomous AI agents that integrate natively with enterprise ERP systems through official production-grade APIs. Every solution is built from the ground up for real operational environments, complex workflows, and measurable business outcomes.

The "AI Arm" Paradigm: We become your AI Arm — embedded intelligence within your organisational structure, operating continuously on your behalf and across the clients you serve.

Key Differentiators

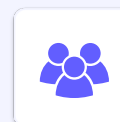

LLM-Driven Reasoning: Agents that think, handle exceptions, and execute end-to-end workflows

Native ERP Integration: SAP, Oracle, and Microsoft integration through official production-grade APIs.

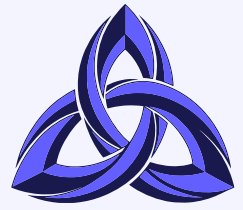

Data Sovereignty: Zero data displacement with secure, in-environment processing

B2B2B Delivery Model: Partner-led AI execution across established business ecosystems.

Most AI vendors sell you a tool and walk away. AgenticSense embeds as your AI execution arm — owning delivery, outcomes, and continuous evolution of your AI capability from day one through long-term growth.

AGENTICSENSE
TRUSTED TECHNOLOGY PARTNER

01

Vision

To become the most trusted AI execution partner for established B2B businesses.

02

Mission

To help partner organisations deliver practical, enterprise-grade AI solutions without building a full internal AI capability.

03

Strategic Intent

To build AgenticSense as the embedded AI arm behind partner ecosystems through a scalable B2B2B model.

The Business Problem

Enterprise organisations still rely on manual, fragmented workflows across finance, HR, procurement, and operations. This creates delays, increases compliance risk, and keeps skilled teams tied to repetitive work instead of higher-value priorities.

Key Challenges

Repetitive manual processing

Compliance and accuracy exposure

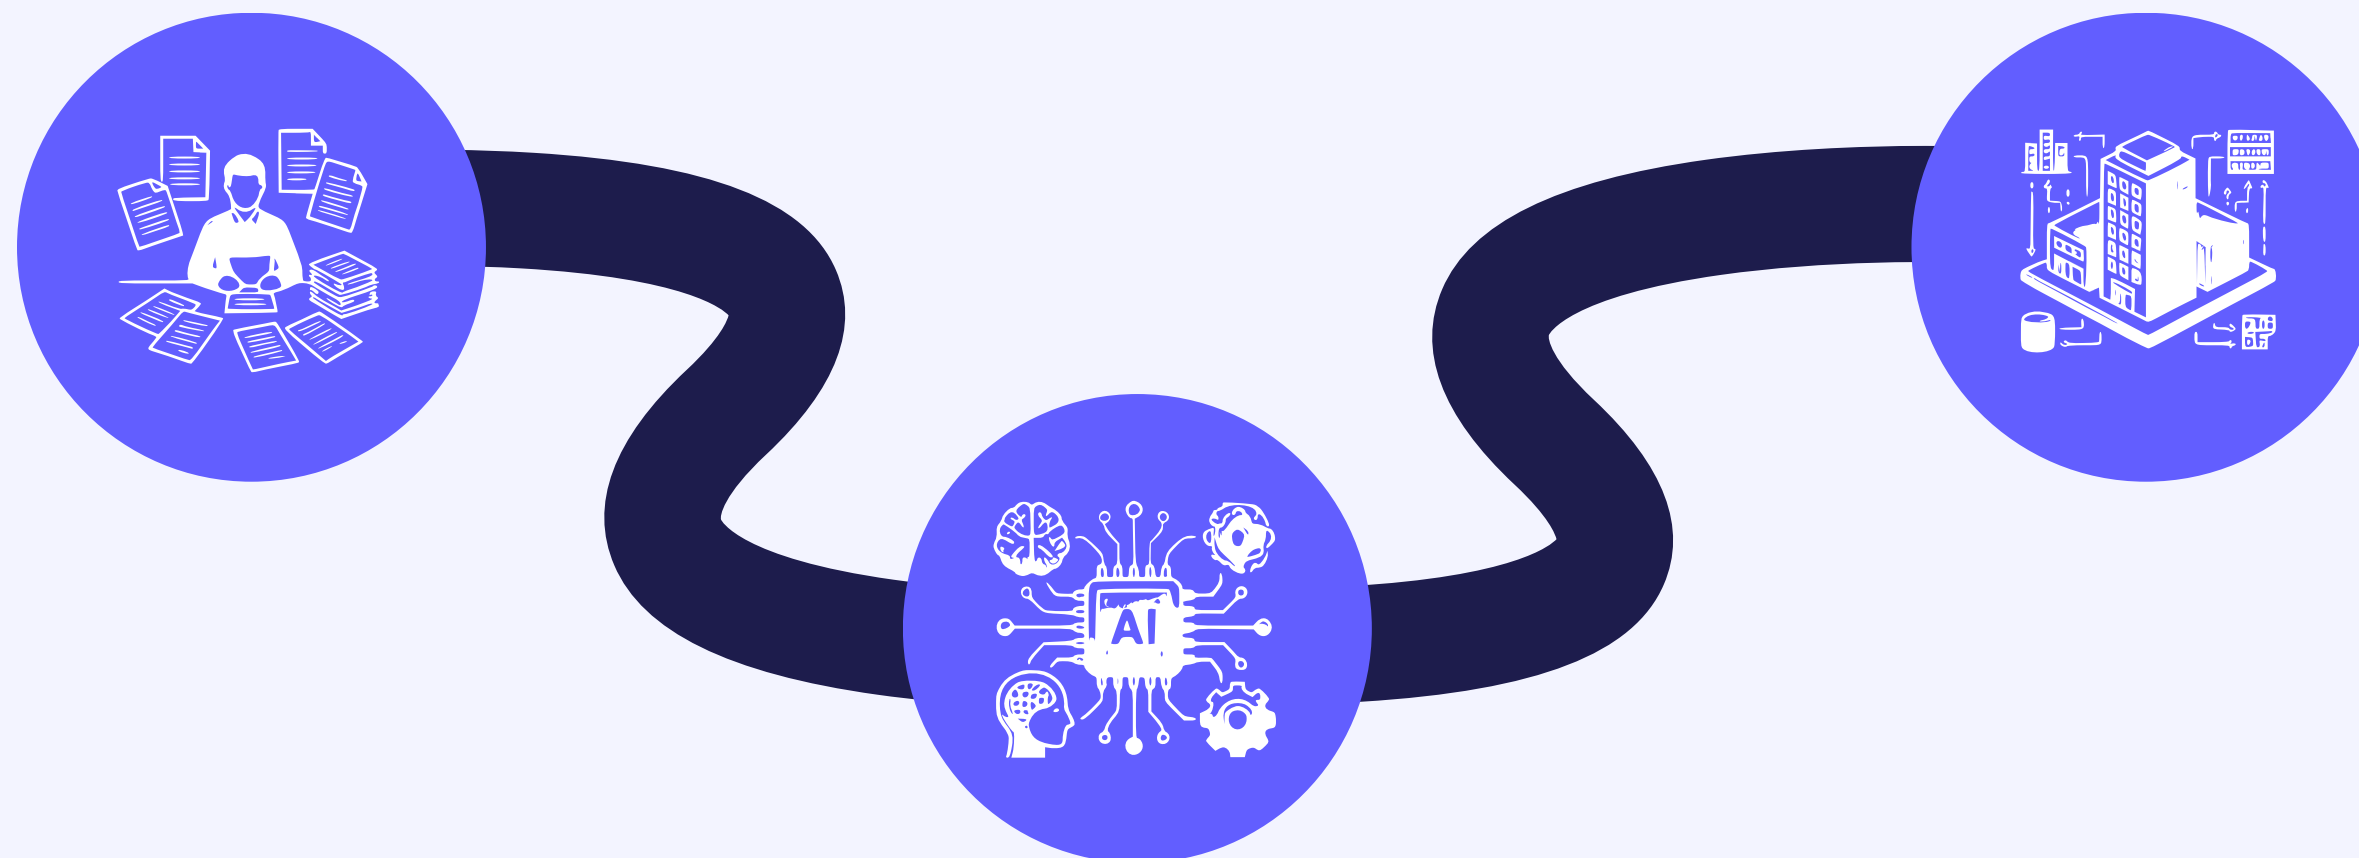

Delayed business operations

Limited strategic use of talent

The AgenticSense Solution

AgenticSense helps enterprise organisations move from manual processing to autonomous, AI-driven operations through intelligent agents built for real business environments. Our solutions reason through workflows, handle exceptions, and execute tasks end-to-end with native enterprise integration.

01

Autonomous Workflow Execution

AI agents that reason, act, and complete business processes beyond simple task automation.

02

Native Enterprise Integration

Solutions designed to connect with ERP, finance, HR, procurement, and operational systems.

03

Intelligent Exception Handling

AI systems capable of identifying issues, routing decisions, and supporting human oversight where needed.

04

Secure & Governed Deployment

Enterprise-grade implementation with auditability, access control, and operational transparency.

05

The AI Arm Paradigm

AgenticSense does not simply provide AI solutions. We operate as an embedded AI arm for established B2B businesses — extending their capability, supporting their client delivery, and enabling long-term AI execution without the need to build a full internal AI division.

Embedded Partnership

Long-term collaboration over one-off delivery

AI Capability Extension

Extending existing service offerings

Long-Term Execution

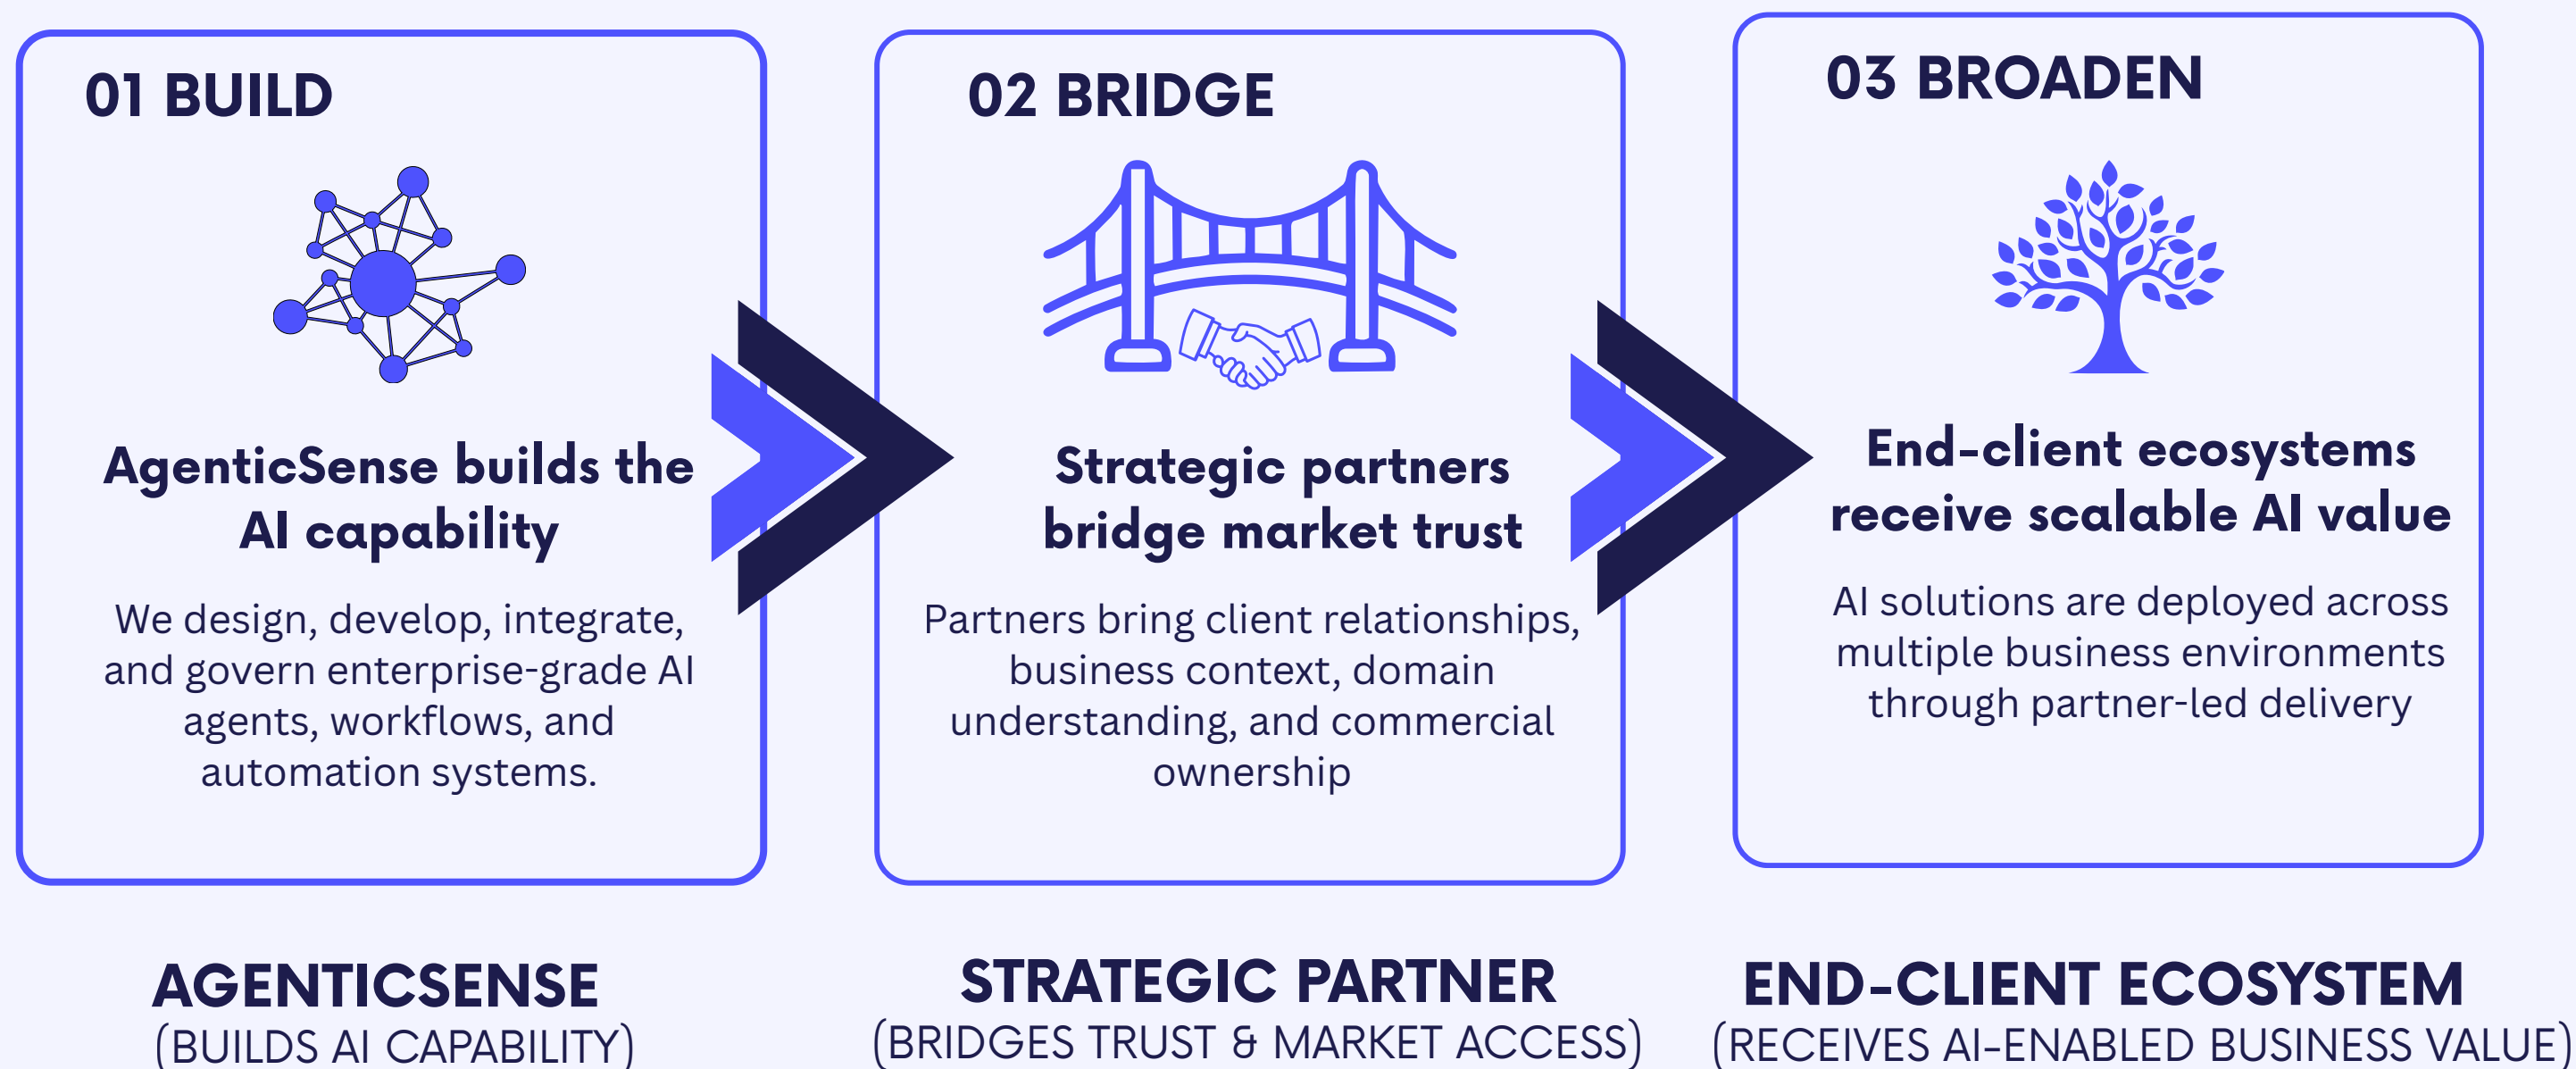

Ongoing operational support

Scalable Ecosystem Value

Growth across partner networks

B2B2B Delivery Model

Why This Model Wins

Business Impact & Strategic Advantage

AgenticSense follows a partner-led B2B2B model that creates faster market access, stronger commercial leverage, and scalable downstream value through trusted business relationships.

From intelligent reasoning to live enterprise execution, AgenticSense delivers automation that is secure, scalable, and built for real operational impact.

01

Lower Trust Barrier

We work through established businesses that already hold market credibility and client trust.

02

Faster Access to Opportunity

One strong partner relationship can unlock multiple qualified downstream opportunities faster than direct one-by-one sales.

03

Scalable Partner-Led Growth

Growth expands through partner ecosystems, making the model more scalable than scattered direct-client acquisition.

04

Reduced Acquisition Pressure

The model reduces dependence on constant outbound hunting and lowers the cost of building pipeline.

05

Stronger Commercial Positioning

AgenticSense stays positioned as a strategic technology partner, not a commodity vendor or low-tier service shop.

06

Multiplied Downstream Value

A single deployment can create value across multiple end-client environments, generating compounding commercial impact over time.

Why Organizations Choose

AgenticSense

Business Impact & Strategic Advantage

AgenticSense combines intelligent automation, native ERP integration, data sovereignty, and enterprise-grade governance to deliver measurable operational value at scale.

01

Agentic-Driven Reasoning

Agents reason through business logic and exceptions.

02

Native ERP Integration

Official APIs across SAP, Oracle, Microsoft, and enterprise systems.

03

Data Sovereignty by Design

Data remains within the client environment.

04

Auditability & Governance

Every action, decision, exception, and escalation is logged.

05

Rapid Time-to-Value

Deployment model built for faster production impact.

06

An Embedded AI Arm

We own delivery, outcomes, and continuous capability evolution.

From intelligent reasoning to live enterprise execution, AgenticSense delivers automation that is secure, scalable, and built for real operational impact.

What We Deliver

End-to-end enterprise AI services designed to help organizations identify, build, deploy, and scale autonomous workflows across live business environments.

1

AI Discovery & Mapping

We identify AI-ready workflows, operational bottlenecks, and high-impact automation opportunities across key business functions.

2

Agentic Workflow Design

We design intelligent multi-step workflows with business logic, role definitions, approval pathways, and human-in-the-loop escalation points.

3

POC & Pilot Development

We build rapid prototypes and controlled pilot environments to validate feasibility, performance, and business fit before full-scale rollout.

4

Full Solution Implementation

We deploy production-ready AI agents, copilots, and integrated automation into live enterprise systems for real operational impact.

5

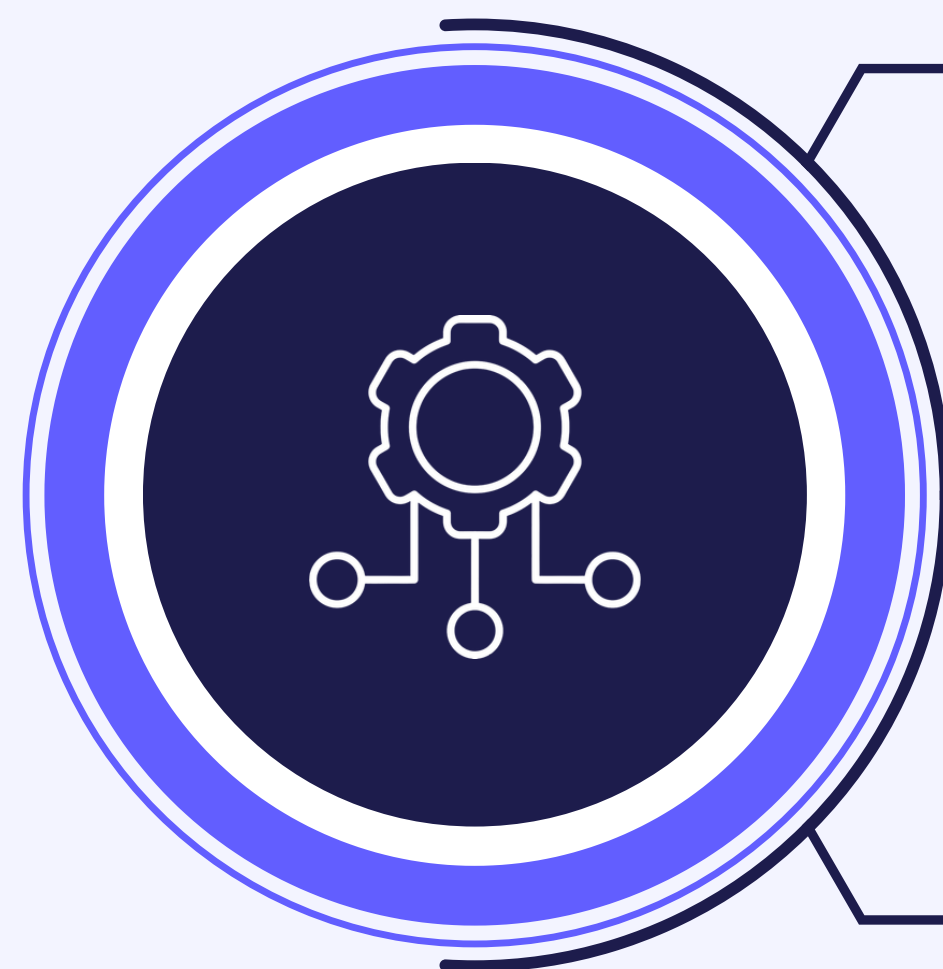

Optimization & Enablement

We continuously refine performance, enhance capabilities, and expand automation as business needs evolve over time.

From discovery to deployment, AgenticSense delivers the full lifecycle of enterprise AI execution.

Core Deployment Areas

AgenticSense deploys autonomous AI across high-impact business functions where speed, accuracy, and operational efficiency matter most.

OFFICE OF FINANCE

We automate finance workflows that demand accuracy, control, and speed across live ERP environments.

AP Automation | AR Processing | Month-End Close | Costing & Inventory

ENTERPRISE HR

We streamline high-volume HR operations through intelligent workflows built for compliance and administrative efficiency.

Onboarding | Payroll Workflows | HR Compliance Support

CROSS-FUNCTIONAL AUTOMATION

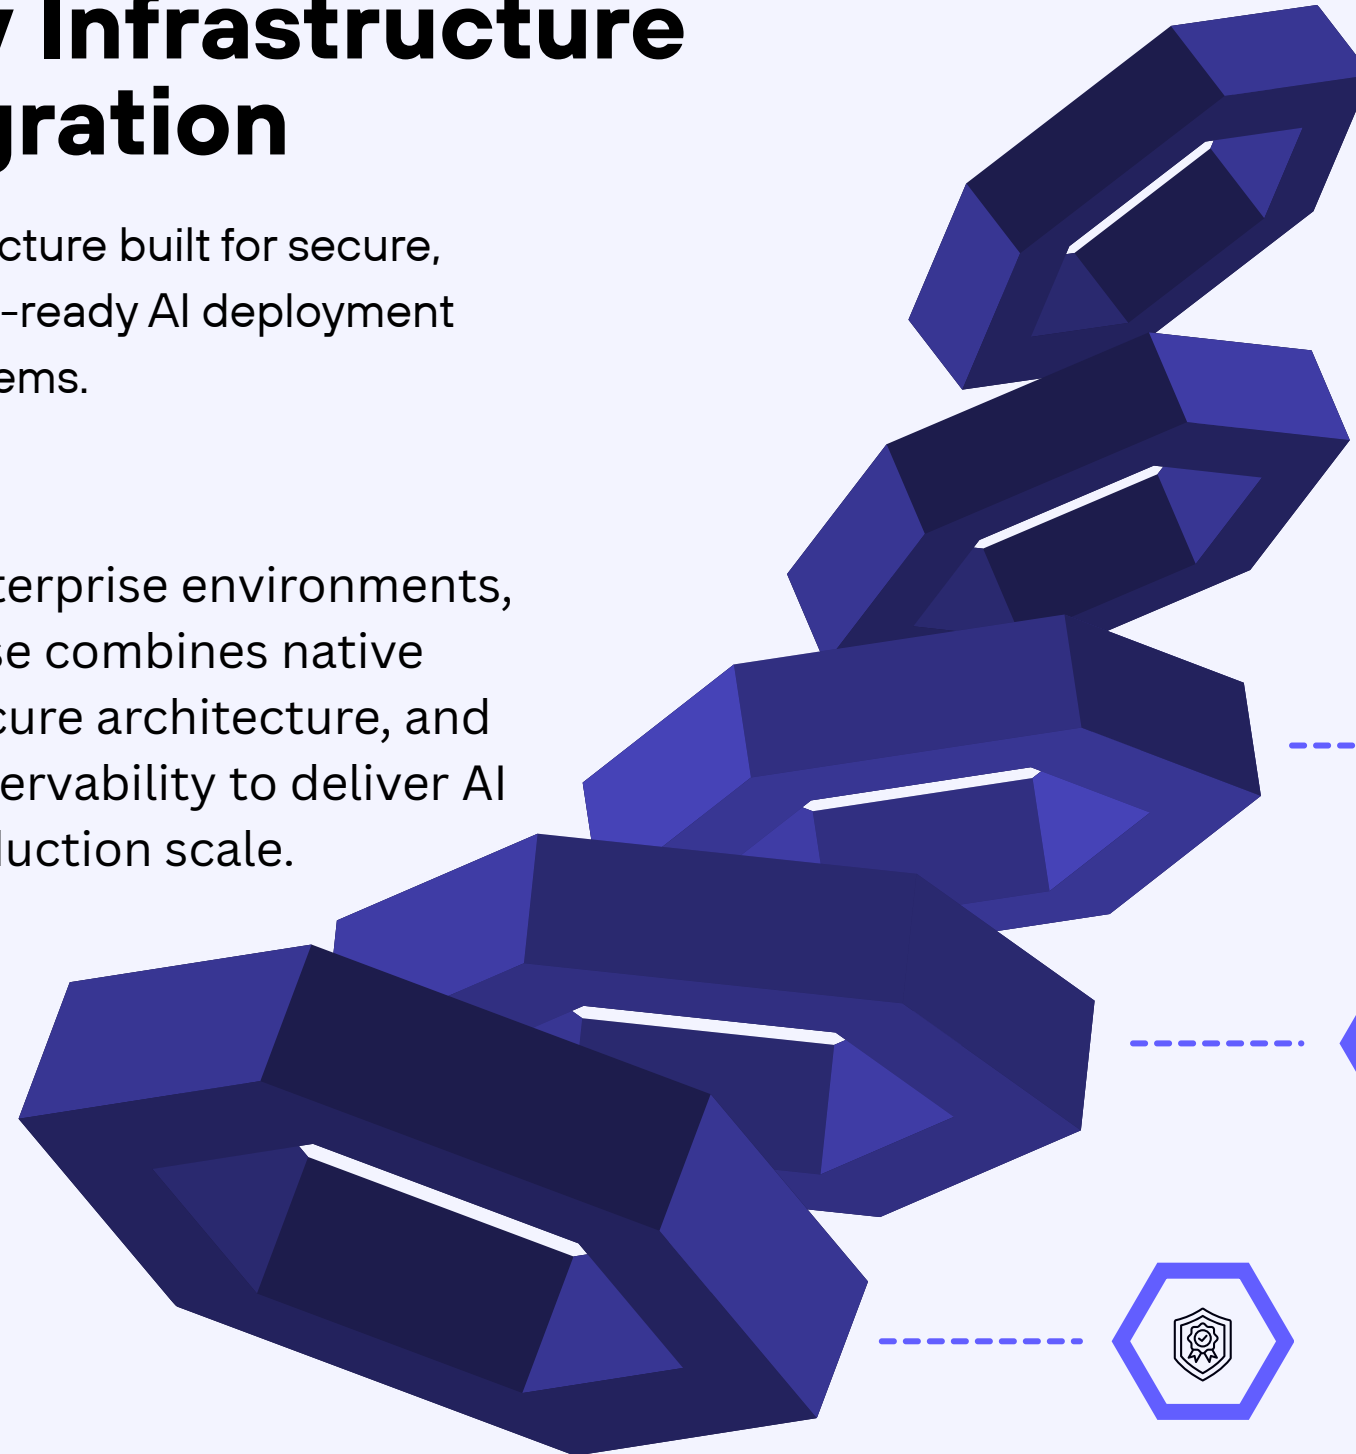

We deploy custom AI workflows across business functions where repetitive, rules-based work slows performance.

Procurement | Supply Chain | IT Service Management | Custom Workflows

Technology Infrastructure & ERP Integration

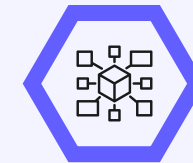

Enterprise-grade architecture built for secure, scalable, and production-ready AI deployment across live business systems.

“ Built for real enterprise environments, AgenticSense combines native integration, secure architecture, and operational observability to deliver AI at production scale.

01 Native ERP Integration

AgenticSense integrates through official production-grade APIs, enabling reliable interaction with live enterprise systems without fragile workarounds or screen scraping.

02 Production-Grade Architecture

Our infrastructure is built for enterprise performance, using a modern layered stack that supports asynchronous execution, transactional reliability, and scalable deployment.

03 Zero Data Displacement

Enterprise data remains within the client environment. AgenticSense agents process information in-memory and write results back through secure integration layers.

04 Observability & Monitoring

Every deployment includes structured logging, real-time monitoring, and performance visibility to support uptime, control, and operational confidence.

05 Enterprise Reliability

Our deployment model is engineered for stable production operations, with architecture designed around uptime, recovery, and long-term scalability.

Governance, Compliance & Auditability

Enterprise automation designed with control, transparency, and risk-aware execution at every stage.

01

Compliance Alignment

AgenticSense deployments are configured to operate within enterprise compliance requirements, internal controls, and sector-specific governance expectations.

Aligned to operational, reporting, and regulatory obligations

02

Explainable AI Logic

Our agents are designed for transparency, with clear reasoning records that show what data was evaluated, what logic was applied, and why a decision was made.

No black-box execution in critical business workflows

03

Transparent Audit Trails

Every transaction, decision, exception, and escalation is logged with structured records that support internal audit, external review, and operational traceability.

Full visibility across automated actions and workflow outcomes

04

Human-in-the-Loop Controls

AgenticSense deployments include intelligent escalation thresholds, ensuring that high-risk, high-value, or policy-sensitive actions can be routed for human review.

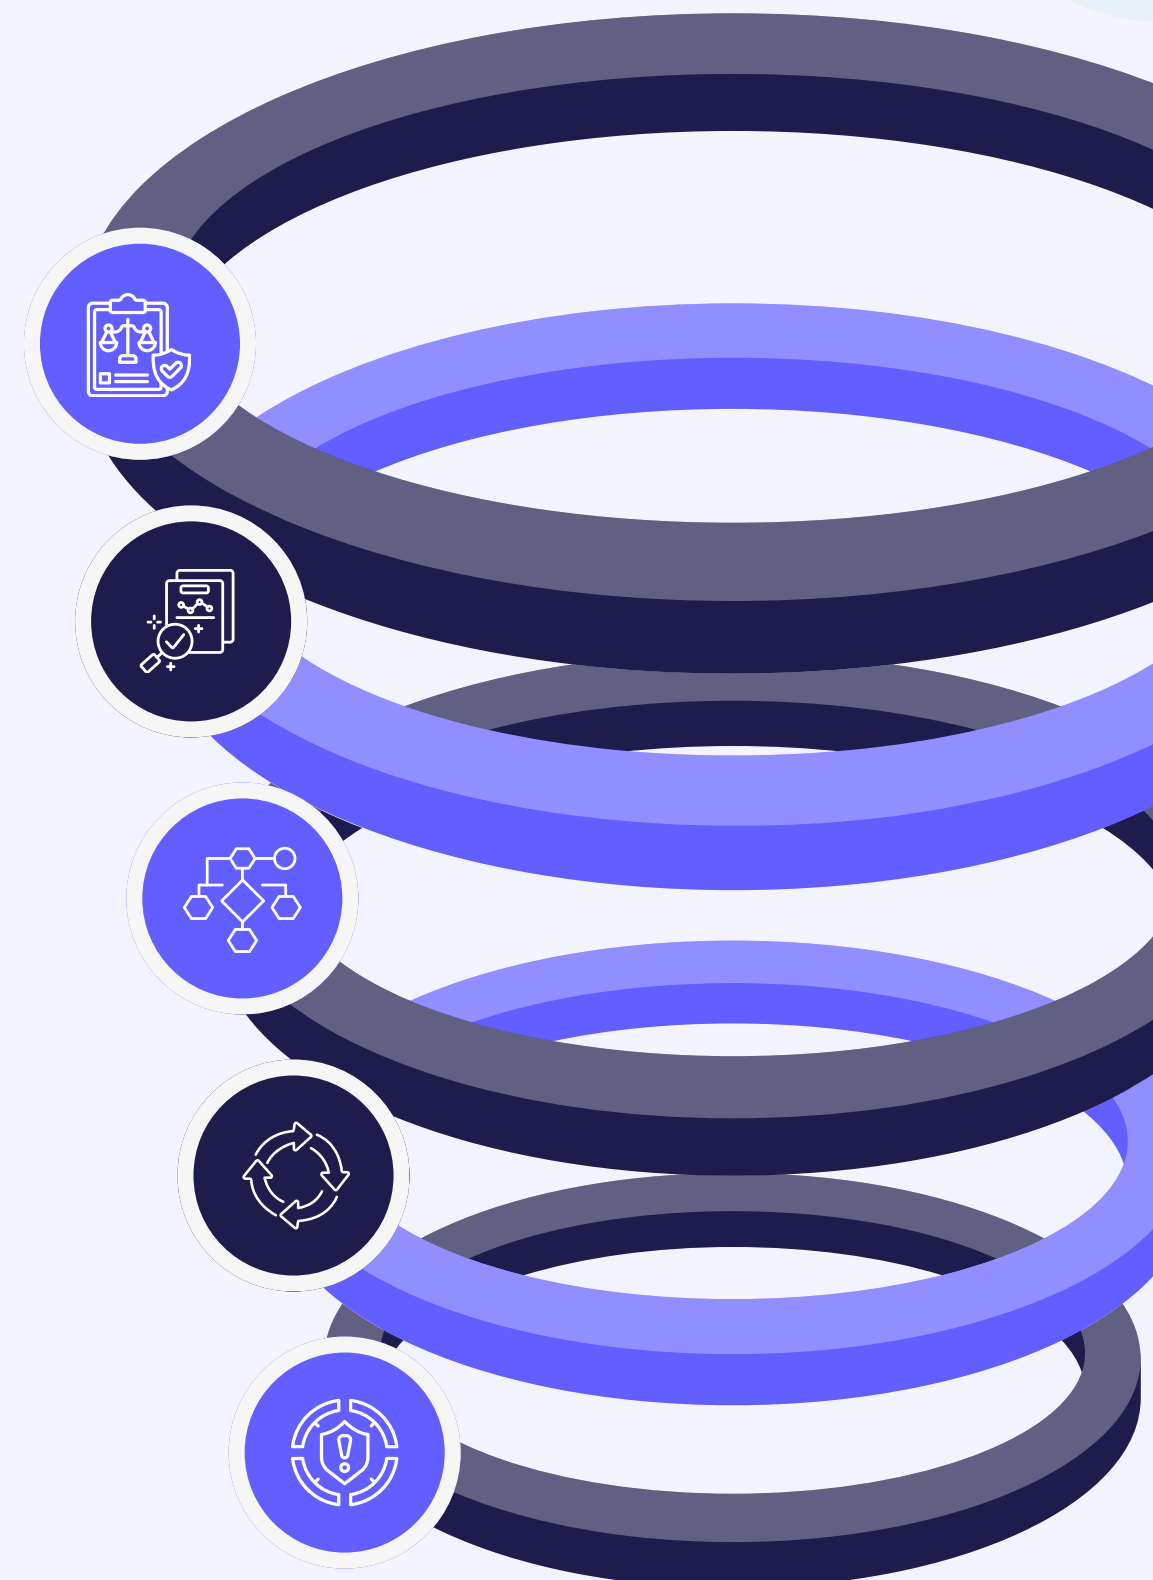

Autonomy where it saves time. Human oversight where it reduces risk.

05

Enterprise Security Controls

Our architecture applies enterprise-grade access controls, encrypted communications, role-based permissions, and secure operational boundaries as standard.

Built for secure execution inside enterprise environments

AI execution with control, trust, and accountability built in.

Revenue & Partnership Model

AgenticSense operates on a disciplined commercial model designed to support long-term partnerships while keeping project delivery commercially clear and scalable.

Onboarding Support

First 3 months of consultation and meeting support to accelerate partner onboarding and opportunity shaping.

Separate Project Fees

POCs, implementations, and custom development are charged separately based on scope, complexity, integrations, security, and delivery requirements.

Monthly Partner Retainer

A standard USD 1,200/month for strategic availability, partner alignment, client-facing support, and AI opportunity development.

Retainer Scope

The retainer supports access and readiness; it does not cover unlimited custom development.

Portfolio Architecture / Partner Tree

AgenticSense follows a partner-led portfolio structure, where end-client environments are represented under the relevant partner relationship to maintain transparency, trust, and B2B2B alignment.

Key Portfolio Principles

Ecosystem-Driven Delivery

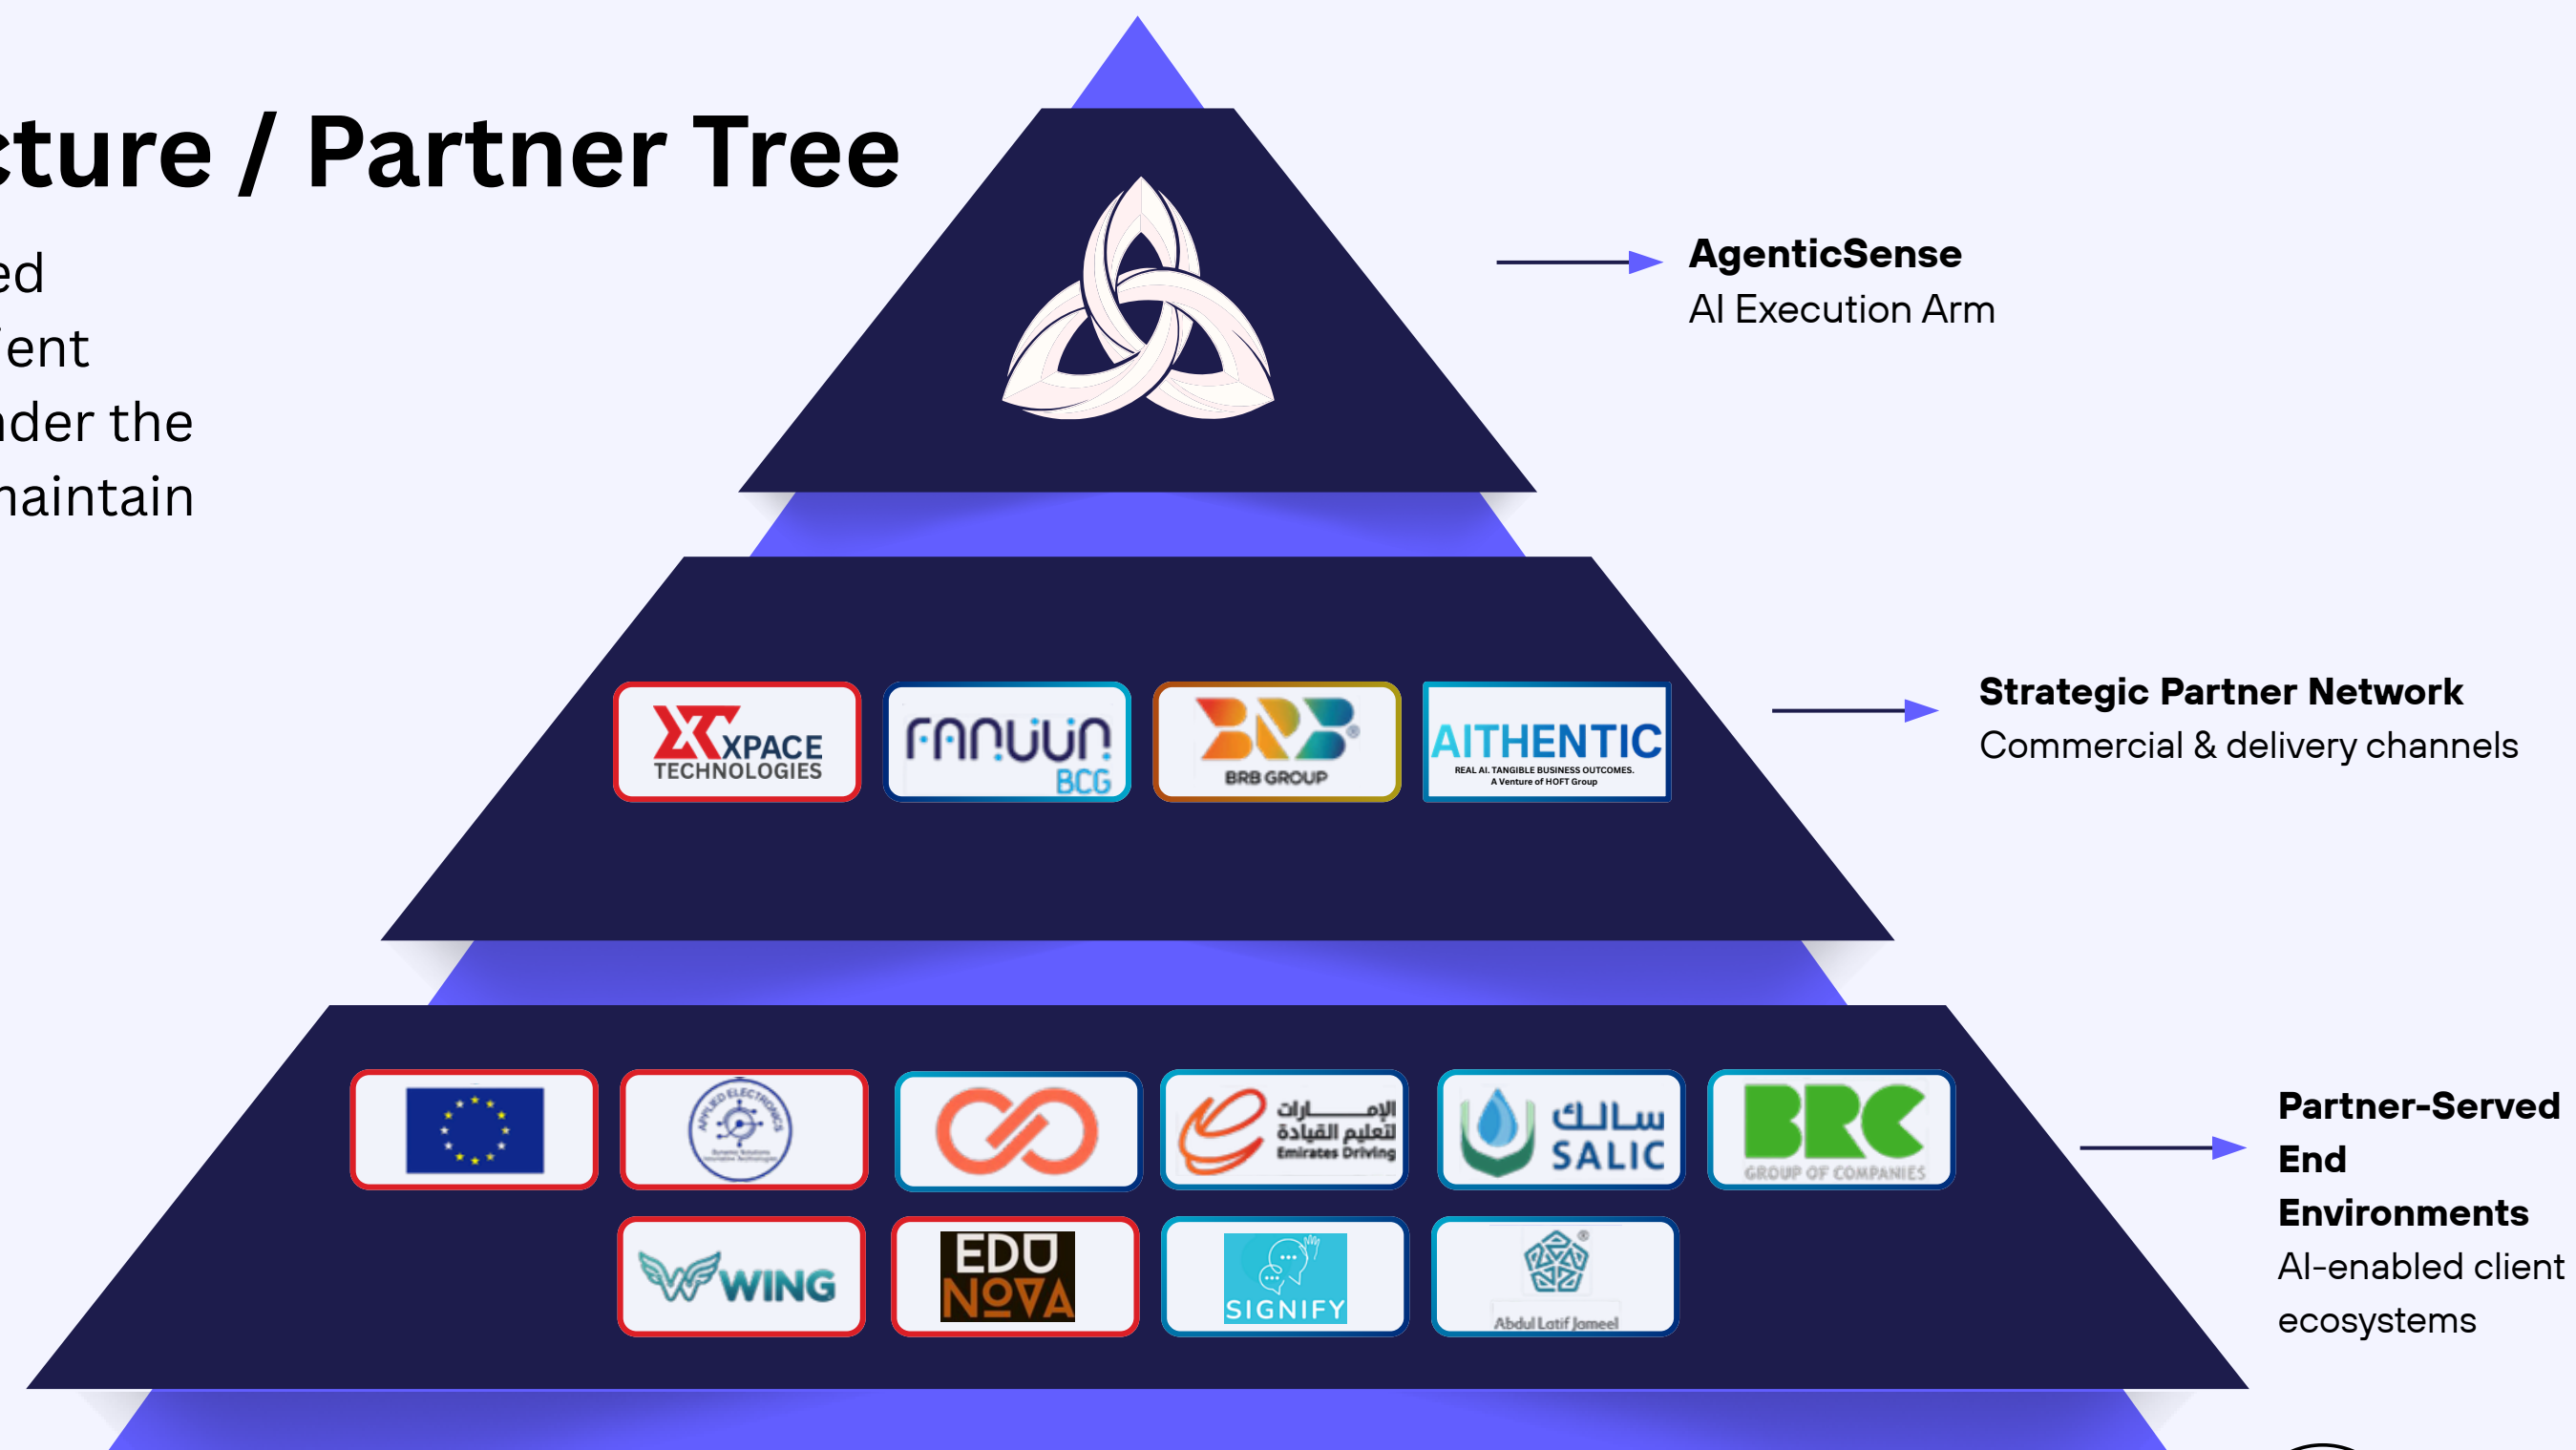

01

Transparent Relationship Boundaries

02

AI Integration Via Strategic Channels

03

Ecosystem Reach

AgenticSense is building traction through partner-led engagements, selected enterprise deployments, and AI enablement across trusted business ecosystems.

Partner-Led Reach

AI capability delivered through strategic business relationships and partner channels

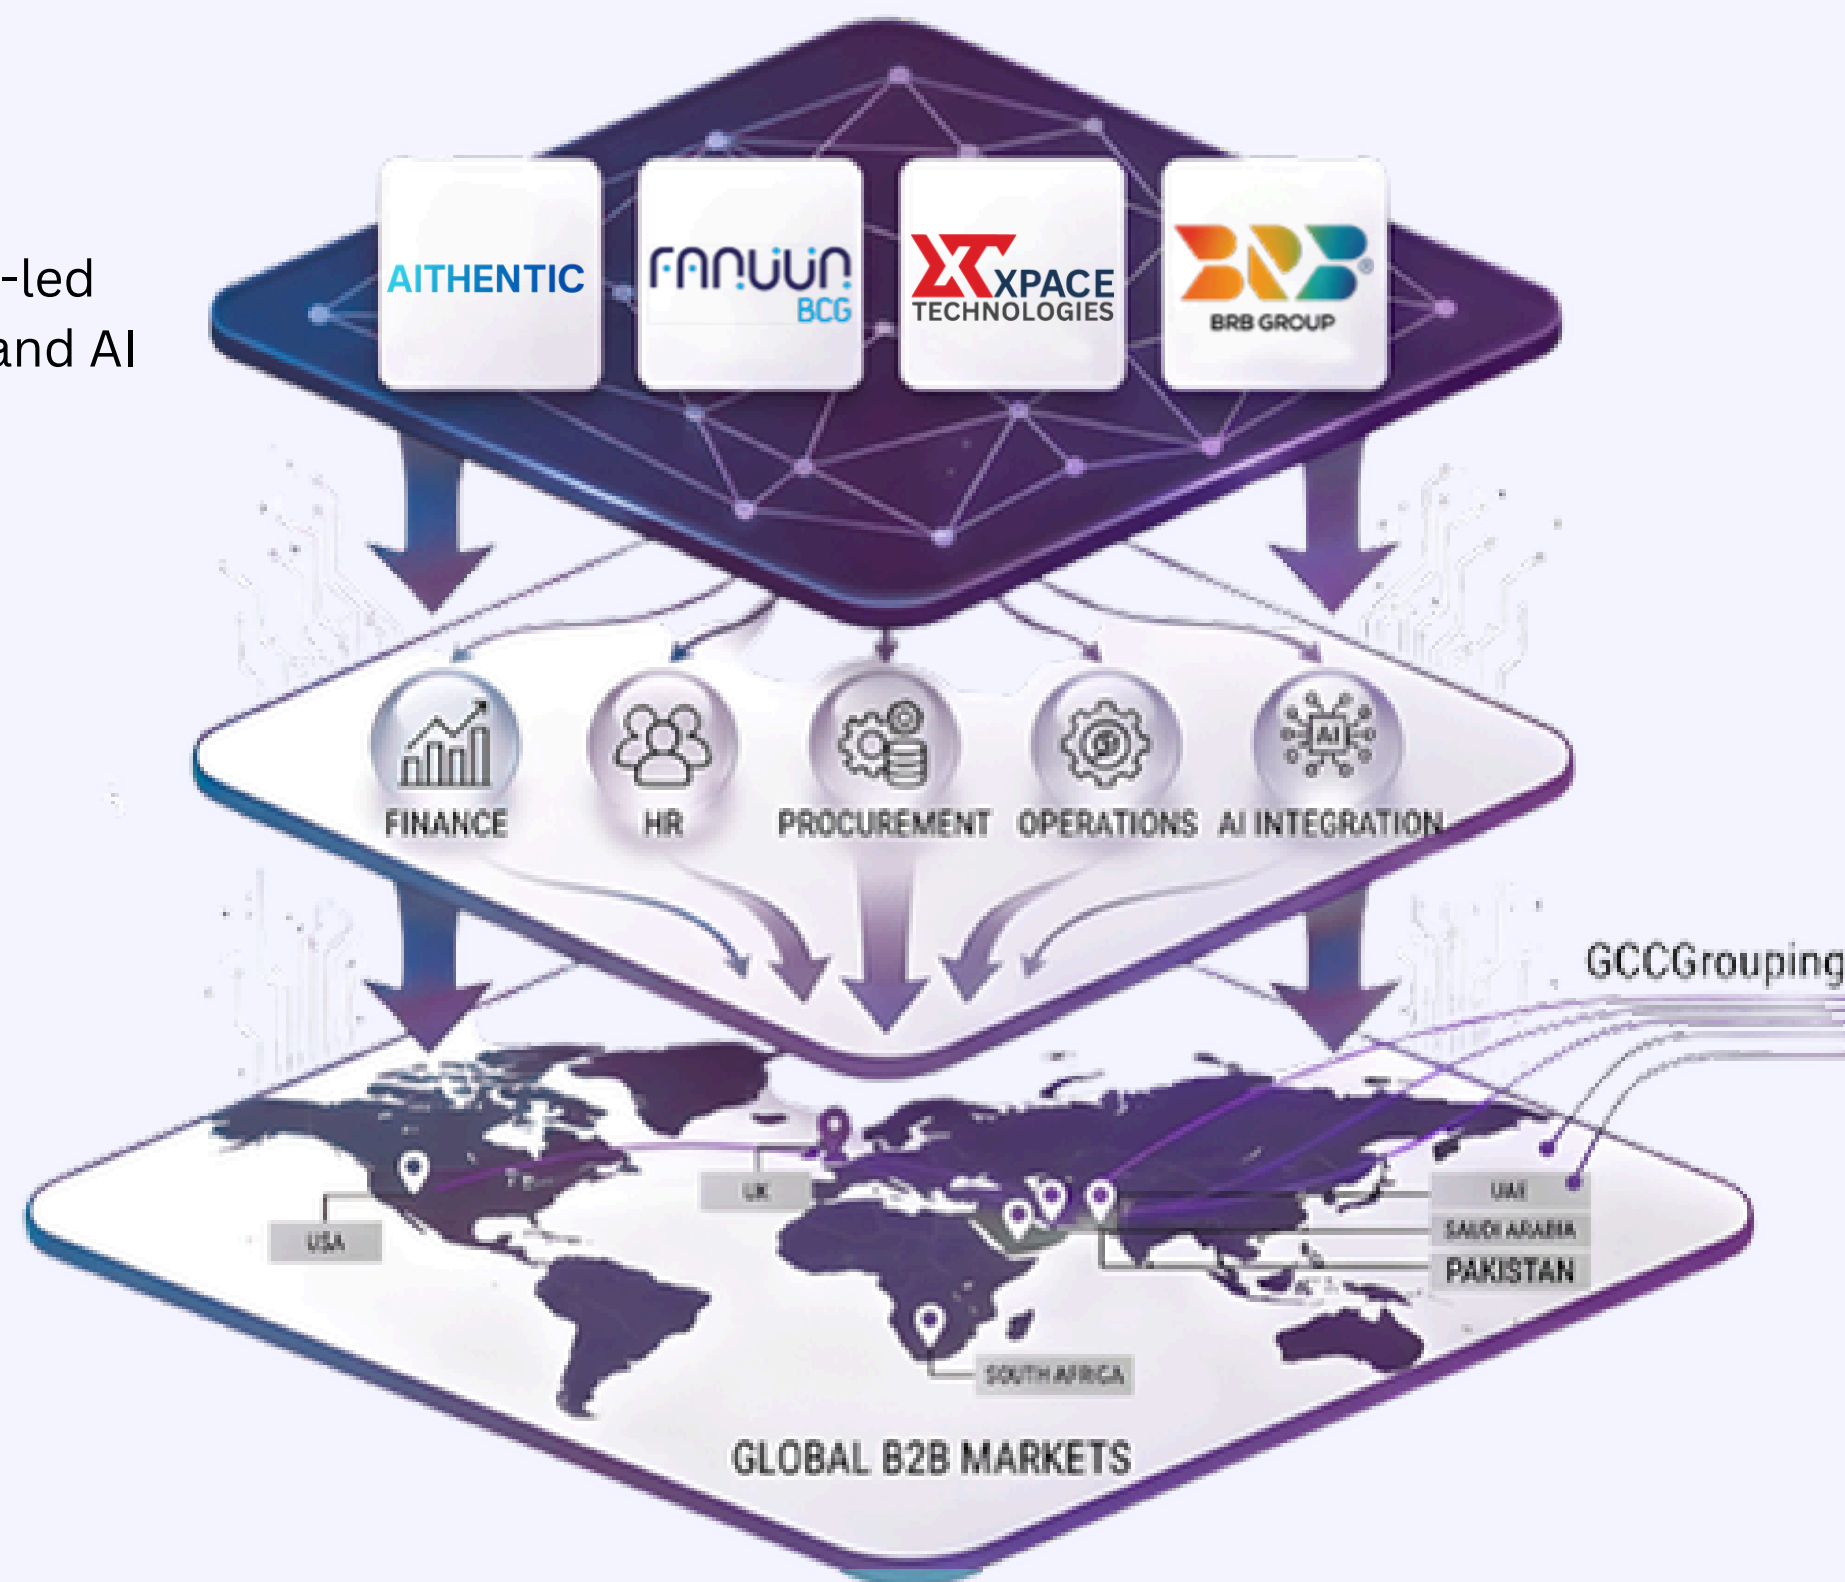

Enterprise Deployment Focus

Solutions aligned with ERP, finance, HR, procurement, and operational workflows.

Ecosystem Scalability

One partnership can create value across multiple downstream business environments.

STRATEGIC MIDDLE EAST PARTNERSHIPS

Muhammad Raheel
Chief Technology Officer

Enterprise AI Architecture | ERP Integration | Agentic Systems

As Chief Technology Officer, **Muhammad Raheel** leads AgenticSense's technical vision, solution architecture, and enterprise AI delivery standards. His focus is on building secure, scalable, and production-ready agentic systems that integrate with real business environments, including ERP platforms, workflow systems, and enterprise data layers.

Our goal is to build AI systems that do not just look impressive, but perform reliably inside real enterprise operations.

Agentic Architecture

Designing intelligent systems capable of reasoning, execution, and exception handling.

Enterprise Integration

Building AI solutions that connect with ERP and business platforms through reliable integration methods.

Technical Governance

Ensuring every solution is built with security, auditability, and operational control.

Scalable Delivery Standards

Creating reusable frameworks for faster, safer, and more consistent AI deployment.

Strong AI execution requires more than technology. It requires structure, accountability, and operational discipline.

Syed Muzammil Ali Shah Bukhari

Chief Operating Officer

Delivery Governance | Partner Coordination | Operational Scale

As Chief Operating Officer, **Syed Muzammil Ali Shah Bukhari** oversees operational execution, partner alignment, and delivery governance across AgenticSense engagements. His role is to ensure that every project moves from strategy to implementation with clarity, discipline, and measurable business value.

Partner Operations

Managing coordination between AgenticSense, strategic partners, and end-client environments.

Delivery Governance

Ensuring projects follow structured timelines, defined responsibilities, and controlled execution.

Process Scalability

Building operational systems that support repeatable delivery across multiple partner ecosystems.

Client Enablement

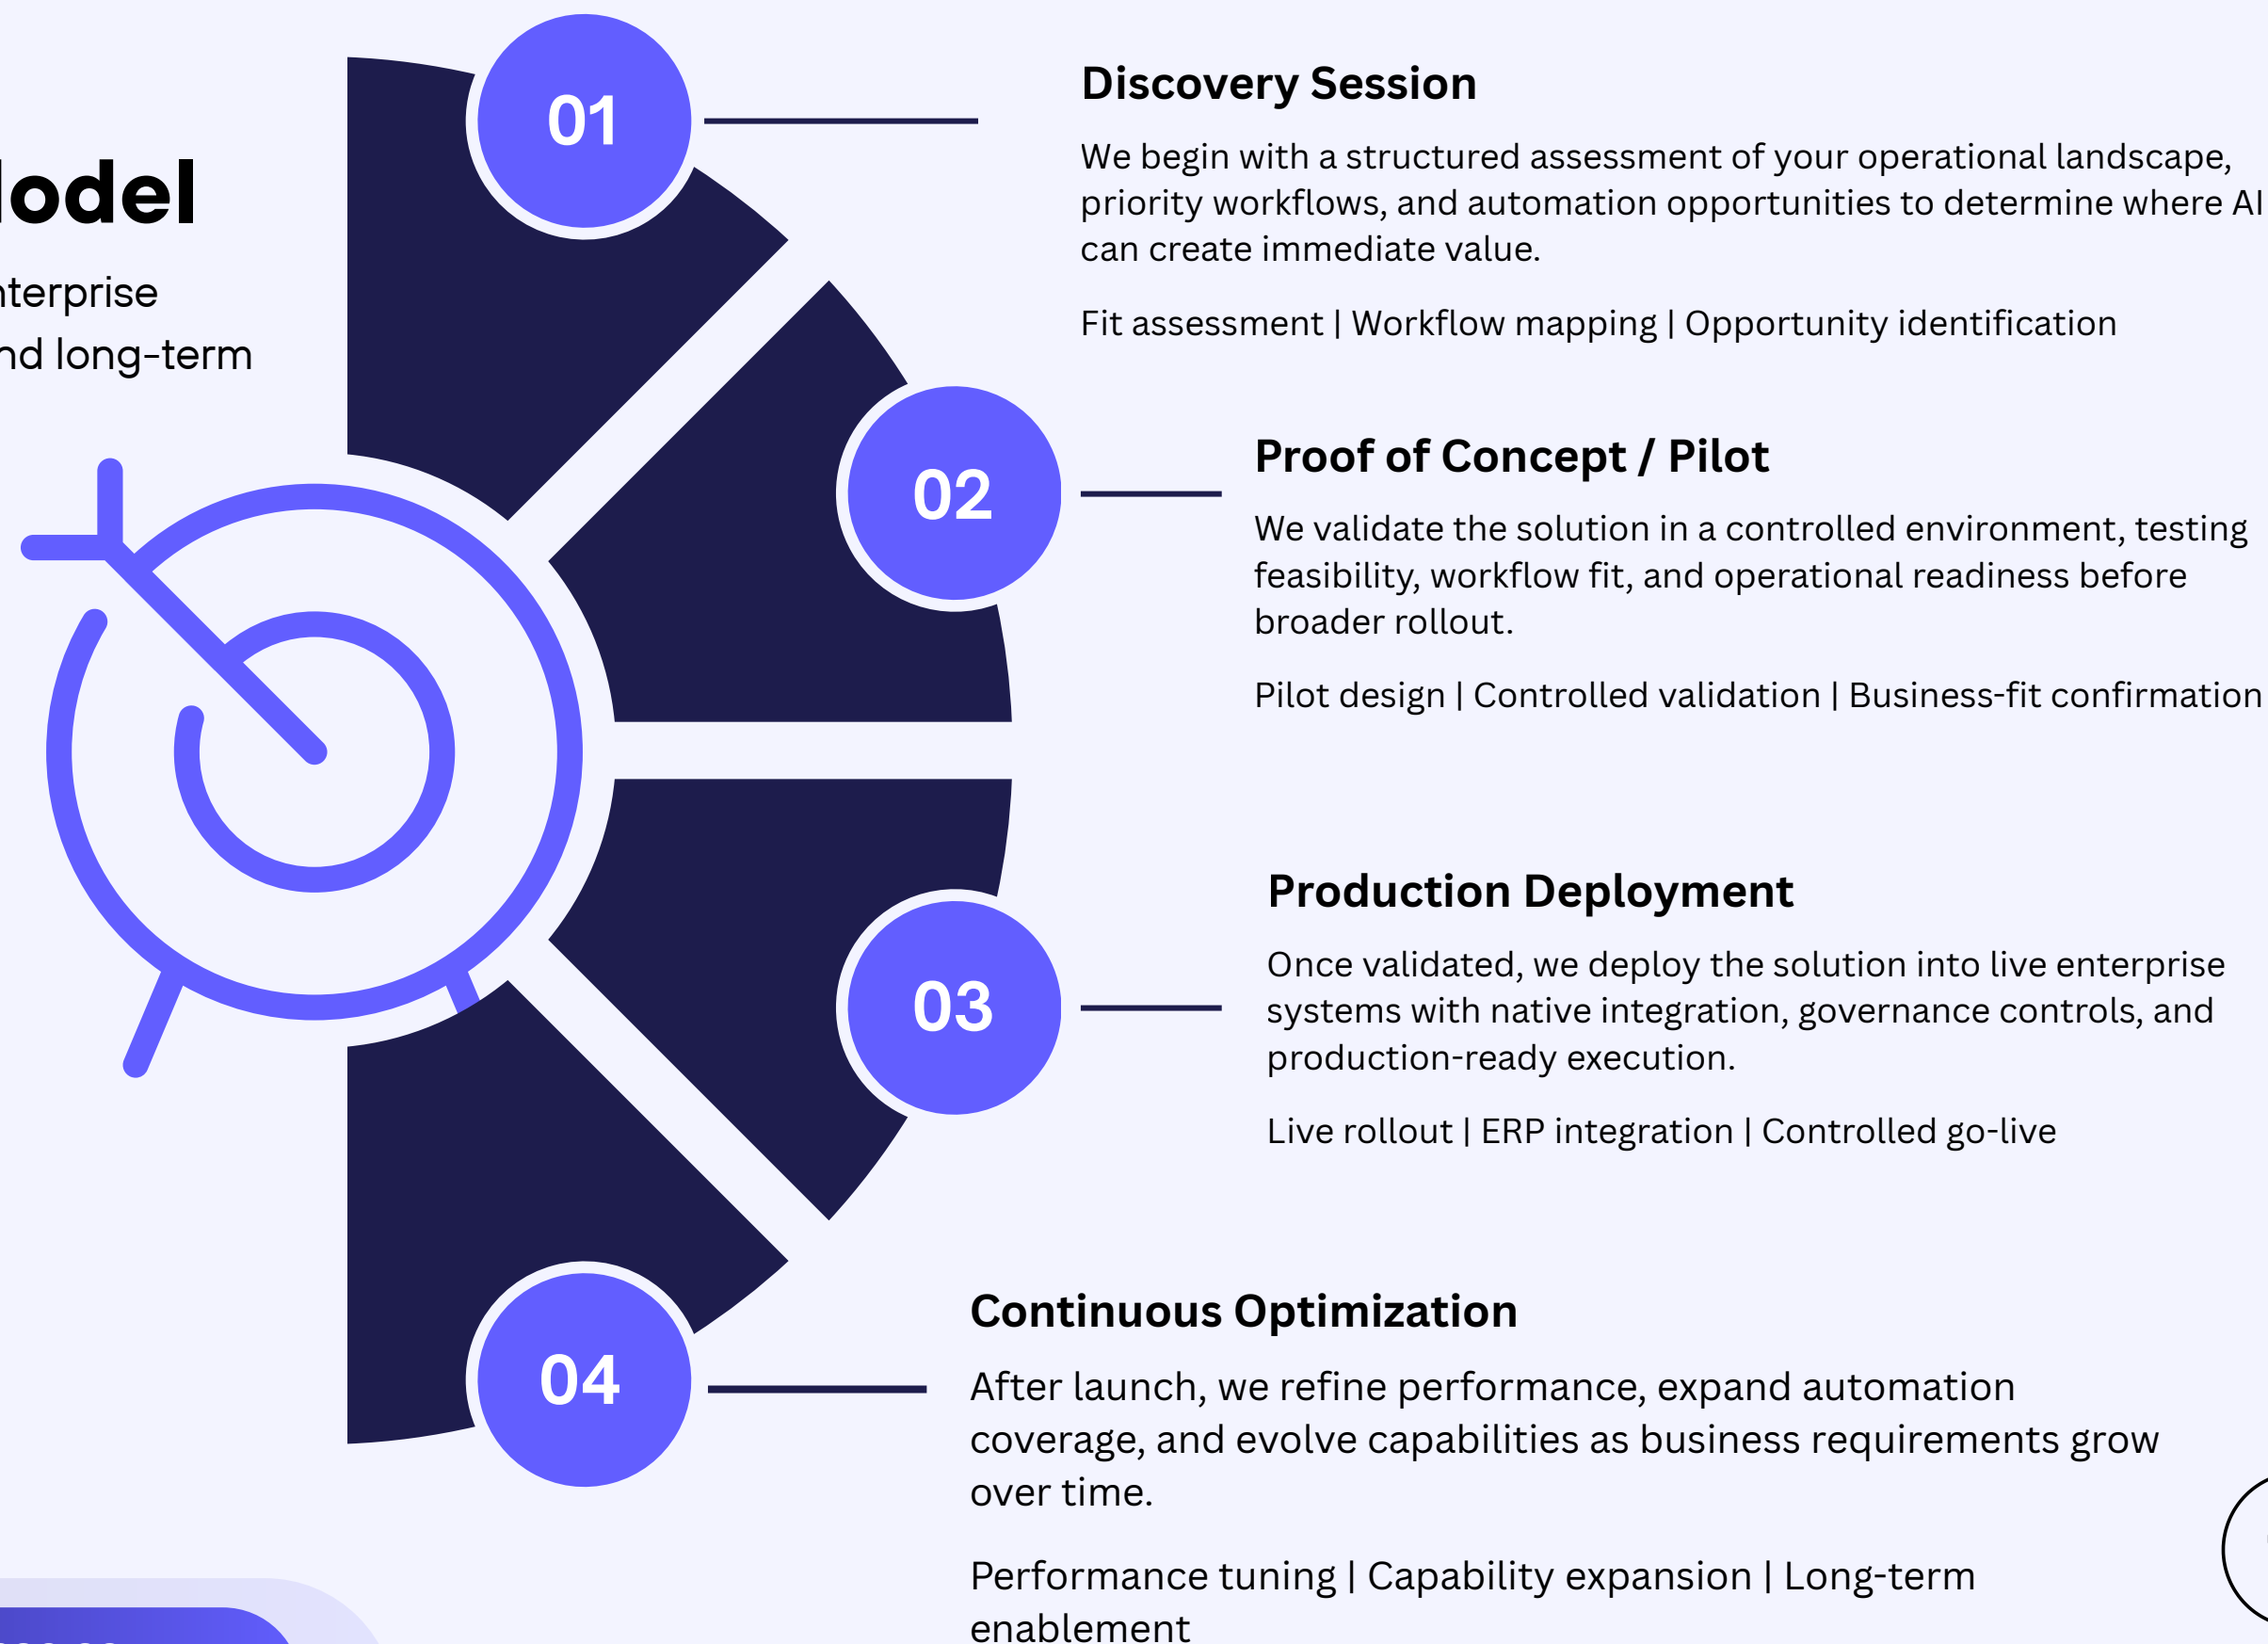

Supporting partners with communication, onboarding, and long-term engagement readiness.

Our Engagement Model

A structured path from discovery to live enterprise deployment, designed for clarity, speed, and long-term value realization.

AgenticSense does not deliver software and disappear — we embed throughout the lifecycle to ensure sustained operational impact.

CONTACT US

Let's Build AI Capability Through Trusted Partnership

AgenticSense partners with established B2B organisations to design, deliver, and scale enterprise-grade AI solutions through a practical B2B2B model.
